

# Hawler medical university College of Medicine

## Medical Terminology

# Objectives

- ▶ The students will be able to have a better understanding of different medical terms used to describe different types of signs and symptoms
  - ▶ The students will be able to understand different types of opposites and their meanings
- 

## OPPOSITES:

**BRADY = Slow. Examples:**

Bradycardia means a slow heart rate.  $<55/\text{min}$

Bradykinesia means slow movements and reflexes

Bradypnea. is abnormal slow breathing

**TACHY = Rapid Examples:**

Tachycardia means a rapid heart rate.  $>110/\text{min}$

Tachypnoea means a rapid respiratory rate.

- ▶ **CRYO = Cold Ex.**
- ▶ Cryosurgery uses cold temperature during surgery.
- ▶ Cryopreservation: Preservation for example of tissues at low temperature.

- ▶ **THERMO = Hot. Examples:**
- ▶ Thermometer is a device used to measure temperature.
- ▶ A burn is a type of Thermal injury.
- ▶ Thermal energy...

« ١١ ٢٢ ٣٣ ٤٤ ٥٥ »

**EU = Good, normal, correct**

Euthyroid state is a state of normal thyroid function.

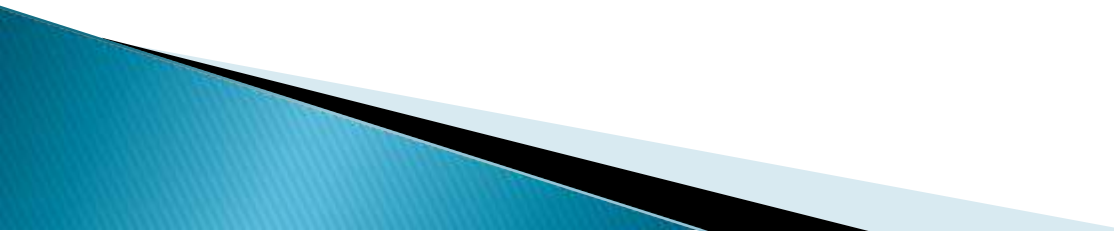

Euphoria is a feeling of well being, happy.

**MAL= Bad; Examples:**

Malabsorption is a state of faulty or impaired absorption.

Malnutrition is faulty or inadequate nutrition.

Malfunction

- ▶ Malaise is a feeling of being ill.
- ▶ Malacia is abnormal softening of tissues.
- ▶ Osteomalacia is abnormal softening of bone in Rickets (in vitamin D deficiency).

د نەجىب شەمس  
گورن

▶ **NEO = New; Examples:**

▶ A neoplasm is a new growth or a tumor.

▶ A neonate is a newborn child.

▶ **GERI = Old; Examples:**

▶ Geriatrics is the study of diseases of old age.

▶ Geriopsychosis is dementia of old age جنون  
(الشيخوخة).

POLY, MULTI = Many, much. Examples:

A multiparas woman has many children.

A multicellular organism consists of several or many cells.

A polypeptide chain consists of chains of linked amino acids. Protein is a polypeptide chain

Polymenorrhoea is increased frequency of menstruation.

Polyuria is increased frequency of urination.

Polyhydramnios, increased amniotic fluid

- ▶ OLIGO = Few, little Examples:
- ▶ Oligomenorrhoea is scanty (little) menstruation.
- ▶ Oliguria is low urine output.
- ▶ Oligospermia is a low sperm count in semen.
- ▶ Oligohydramnios decreased amniotic fluid  
polyhydramnios increased amniotic fluid

**HYPER = High.** Examples:

**Hypertension** is increased blood pressure.

**Hyperglycemia** is increased level of blood sugar.

**Hyperthyroidism** is a state of increased thyroid function due to overproduction of thyroid hormones.

**Hyperpyrexia** is a very high body temperature (40 degrees centigrade or more).

- ▶ **HYPO = Low.** Examples:
- ▶ Hypotension is low blood pressure.
- ▶ Hypothyroidism is a state of low thyroid function due to impaired thyroid hormone production or synthesis.
- ▶ Hypoglycemia is low glucose level in blood.

Hyponatremia... Na<sup>+</sup>

Calcemia... Ca<sup>++</sup>

Kalemia... K<sup>+</sup>

Uricemia... Uric acid

## NEGATIVES:

*ach*

**“A” = not, without. Examples:**

Aphasia is loss of speech.

Achlorohydria is absence of hydrochloric acid (HCl) in gastric secretions.

Aspermia is absent spermatozoa in semen.

Apnea no respiration

Anosmia is loss of the smell sensation

Amastia is absence of breast tissue ✓

Analgesia

- ▶ “An” = not, without. Examples:
- ▶ Analgesia: without pain. Paracetamol is analgesic drug that relieves pain.
- ▶ Anuria is cessation of urination.
- ▶ Anaerobic bacteria can live in absence of air or oxygen.

***“Anti”* = Against. Examples:**

**Antibiotic** is a drug that inhibits growth or kills bacteria.

An antiemetic drug is a drug that stops vomiting.

An antipyretic drug that reduces elevated body temperature (against fever).

Antibody

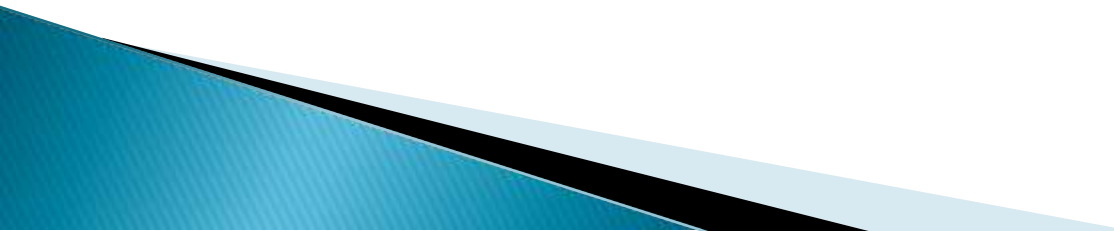

***“Contra”* = Against. Examples:**

**Contraception:** against pregnancy.

Conception=pregnancy

**Contraindications** are conditions that prevent the use of a drug or certain treatment.

Indication

- ▶ **“De” = remove, without. Examples:** سلب
- ▶ Decalcification: removal of calcification.
- ▶ Decolorization: destaining or removal of colors.
- ▶ Depigmentation: removal of pigment.
- ▶ Decompression: removal of pressure.

**“Dis” = Remove, absence. Examples:**

Disorder: Loss of order.

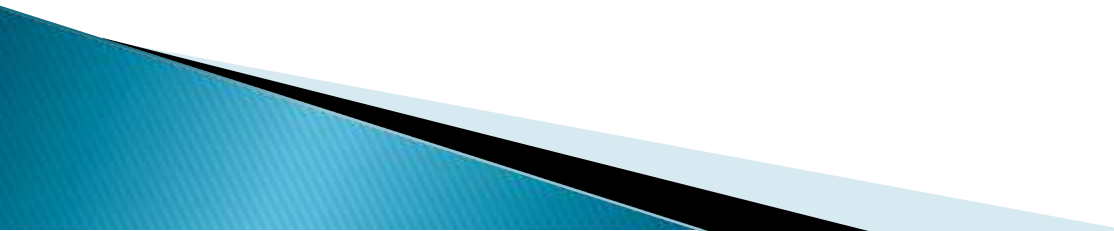

Disinfection: sterilization.

Discoloration is abnormality or loss of normal coloration.

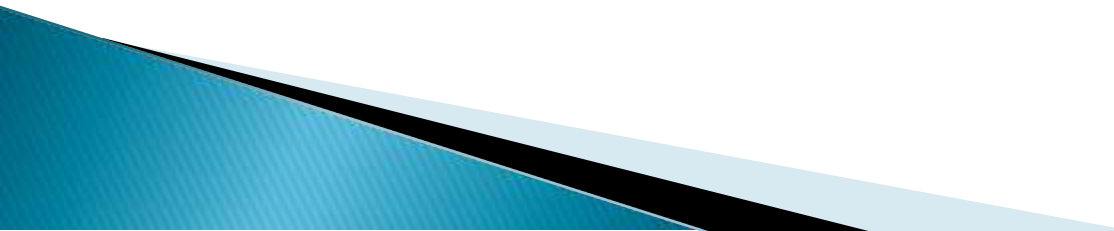

Cyanosis: Bluish discoloration of skin and mucosa

Jaundice: Yellowish discoloration of skin and mucosa (hyperbilirubinemia)

Xanthoma: Yellowish spots of lipid (cholesterol)

- ▶ **“Dys” = Difficult.**
  - ▶ Dysphagia is difficulty in swallowing.
  - ▶ Dyspnoea is difficulty in breathing.
  - ▶ Dysuria is difficulty and pain during urination.
  - ▶ Dysfunction is abnormality of function.
- 

**“In” = not.**

In**somnia** is sleeplessness.

Insufficient is not enough.

Inefficient is bad performance.

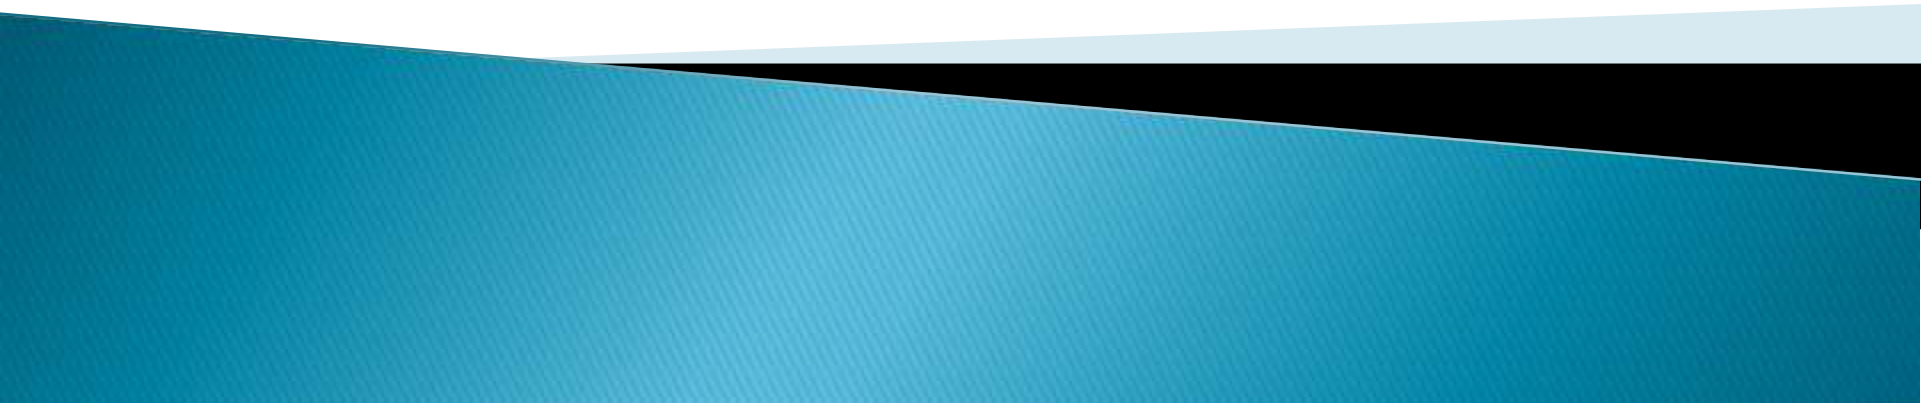

Inaudible: cannot be heard.

- ▶ **“Im” = not. Examples:**
- ▶ Impolite: not nice in behaviour.
- ▶ Immortal: eternal. Morto=death mortality rate= death rate
- ▶ Immobilization: prevent movement.
- ▶ Impermeable: does not allow passage of substances (as of a fluid) across its substance.

THANK YOU

A decorative graphic at the bottom of the slide consisting of a dark blue wavy shape on the left, a black horizontal band in the middle, and a light blue wavy shape on the right.
