

MEDICAL TERMINOLOGY

OBJECTIVES

- To expose to more medical terms and definitions in the medical fields
- Specific definitions used in microbiology and histology .

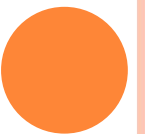

VIRO = Related to viruses

Virology is the science concerned with the study of viruses.

Antiviral drugs are those that kill viruses.

Viremia is the circulation of viruses in peripheral blood.

- IDIO = Related to idea, theme, individual
- Ideology is visionary theorization.
- Ideotic, idiocy: mental deficiency.
- Idiopathic is of unknown cause. The cause is peculiar to the individual case.

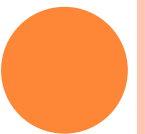

BLAST: An immature cell;
Lymphoblast is an immature precursors of lymphocytes.
Hepatoblastoma is a tumor of immature precursors of hepatocytes.

CYTO; CYTE = cell.

Erythrocytes are the red blood cells.

Leukocytes are the white blood cells.

Cytological diagnosis is based on the study of the morphology of cells.

FIBR/O: Fiber.

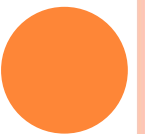

Fibroblast: A cell producing collagen fibers.

Fibrous tissue: A tissue rich in collagen fibers.

HIST/O: tissue.

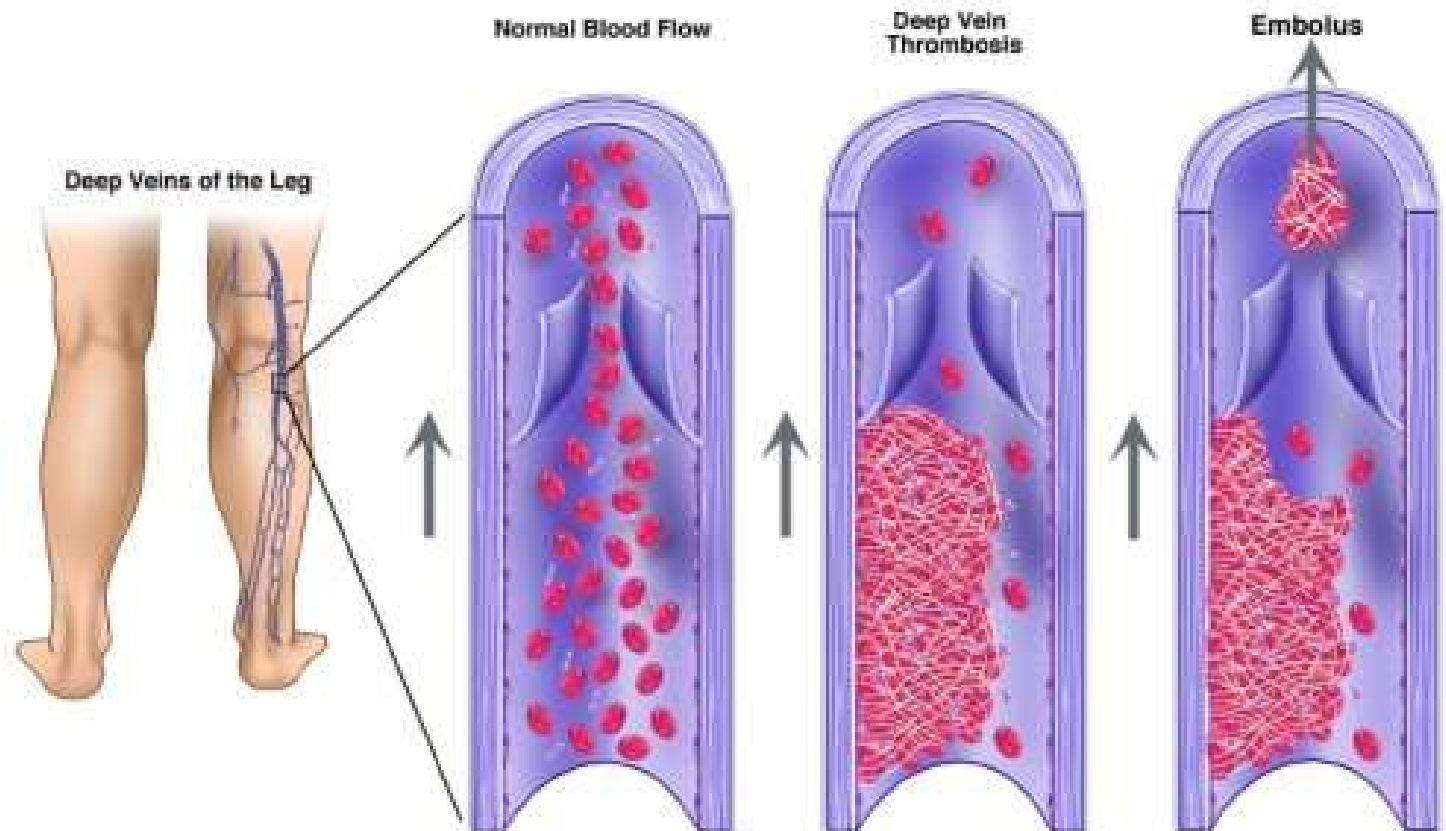

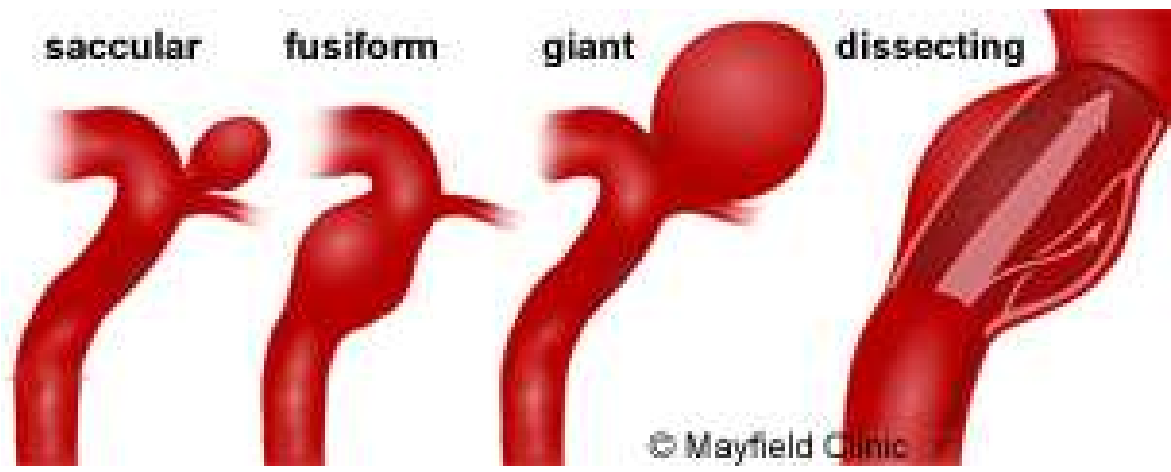

Histiocytes are tissue cells derived from blood monocytes.

Histology: the study of structure and constituents of tissues.

- ANEURYSM is weakness and abnormal dilatation of a blood vessel Ex. Syphilitic and atherosclerotic aortic aneurysms.
- **EMBOLISM:** A mass of undissolved material transferred from one part of the circulation and impacted in another. Ex. Thrombo-embolism detached from deep venous thrombosis of the leg veins and becomes impacted in lung circulation (**pulmonary embolism**).

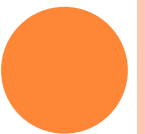

MORPHO: Form .

Morphology of cells or tissue is their appearance..

Metamorphosis is a change of form or appearance, as in the life cycle of a frog.

ADENO = Gland.

Adenocarcinoma is a malignant tumor of glandular tissue origin.

- HEMO/HEMATO = Blood.
 - Hemoptysis: expectoration of blood.
 - Hematemesis: vomiting of blood.
 - Hematological tests: investigations of blood diseases.
-
- LYMPH/O: lymph
 - Lymphoma is a malignant tumor of lymphoid tissue.
 - Lymph nodes specialized organs of lymphoid tissue.

MUC/O: Viscid fluid.

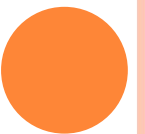

Mucus is the viscid secretion of glandular epithelium lining the respiratory passages. A mucus membrane is the lining epithelium secreting mucus.

Mucorrhoea is excessive secretion of mucus.

PROTE/O: Protein.

Proteinacious fluid: A fluid rich in protein;

Proteolytic enzyme is one that breaks down protein (protease).

AMYL/O: Starch.

Amyloid is an abnormal protein with starch like characters.

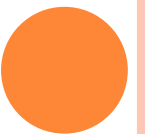

Andro- related to male

Ex: Androgens are hormones producing male secondary characters.

Gyne- related to a female

Ex:

Gynecology is the science dealing with diseases related to the female genital tract.

Pedi- related to the child

Ex: Pediatrics is the study of diseases of childhood.

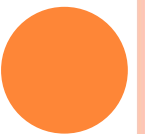

Pediatrician is the physician dealing with diseases of childhood..

Cheiro- related to the hand

Ex: Cheirospasm is muscle spasm of the hand

Cheli/o- related to the lip

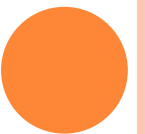

Ex: Cheilitis is (inflammation of the lip).

Lapar/o- related to the abdomen

Ex: Laparatomy is surgical exploration of the abdomen.

Laparoscope is an instrument used to visualize the abdominal cavity inserted through a small opening in the abdominal wall.

- **Men/o-related to month.** Examples:
- Menstrual cycle is the monthly bleeding of a female.
- Menorrhagia is excessive monthly vaginal bleeding.
- Oligomenorrhoea is scanty monthly vaginal bleeding.
- Amenorrhoea is absent menses due to pregnancy, menopause or ovarian failure.
